**B**ruynzeel plywood is the finest marine grade plywood in the world. The Allin company that own the Bruynzeel brand has been peeling veneers since the early 1900s and is re-known for the highest production standards. Every attention is paid to details like core construction, glue quality, and face veneer quality and thickness.

Bruynzeel Hechthout® is a weather and water resistant, 100% Gaboon (*Aucoumea klaineana*) marine plywood. Available in A/A and A/B grades where the A faces have no joints and are defect free. Each steamed Gaboon veneer is selected by hand and only the best are used as raw material to create the panel.

The patented Hechthout production process ensures a superior quality panel that is inspected in order to meet the highest technical and aesthetic standards required for to be certified as BS1088 and by Lloyd's Register (the highest standard for marine grade products)

Import of the product to North America has been difficult but now J. Gibson McIlvain is an exclusive distributor that is importing the Hechthout® Marine Grade product and supplying it all across North America for serious marine construction.

BS 1088

**M**arine Grade plywood comes in many variations where at one end it is best used for exterior construction on buildings and at the other it needs to stand up to direct submersion in salt water.

Boat builders know that only the finest plywood can withstand the harsh environment that is commonplace with their craft. The panel must be water resistant and able to stand up to a wide temperature range while remaining flat and stable. Rigidity to span between framing and a lightweight panel are absolutely necessary as well.

Other brands of marine plywood like Jobert and Marinetek do not use 100% weather resistant plies and do not meet the high Lloyd's Register standards.

Bruynzeel marine panels are truly the only answer when you are serious about the quality of craft that you make. Whether it be a canoe, tall ship, or super yacht, a top quality marine grade panel is of utmost importance to a long lasting and seaworthy craft.

J. Gibson McIlvain offers Bruynzeel plywood direct from the mill and shipped nationwide for significant savings over buying through middleman brokers. We carry a full range of sizes as well as many other products the boat builders needs from hardwood plywood, millwork, and solid wood for interior cabinetry to Teak decking boards.

Call us today to discuss your next project and we will consult with you to find the best product or products to make your boat a success.
